Key Language and Representations

Word Problems are the arithmetic number sentences written in a real-life reasoning and problem solving scenario. e.g. 15 + 9 = 2

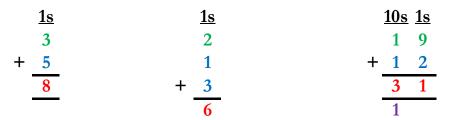

Concrete Objects are manipulated or handled to calculate and represent a number sentence i.e. multilink cubes, numicon, counters, number line.

Number Lines are used to count forwards e.g. 0, 1, 2, 3, 4, 5 and also to count backwards e.g. 10, 9, 8, 7, 6, 5.

Column Addition is the formal written method of adding two or more numbers together, using a vertical arrangement in a columnar format.

Regroup 10 ones into 1 ten.

Column Subtraction is the formal written method of subtracting a smaller number from a bigger number, using a vertical arrangement in a columnar format.

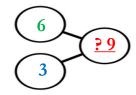

Strategy Applied refers to when a formal written method is used to calculate a number senter 25 - 5 = 20

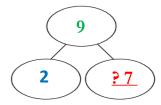

Explained using appropriate mathematical language, proven using concrete objects that can be handled, shown with pictorial representations visualising the calculations, to ensure a greater understanding of a mathematical concept

Part Whole Models are pictorial mathematical images to represent varied calculations and number sentences.

e.g.
$$6 + 3 = \frac{29}{9}$$

e.g.
$$9 - 2 = ?7$$

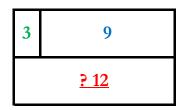

Bar Models are an image, that pictorially represents a number sentence.

e.g.
$$3 + 9 = 212$$

e.g.
$$20 - 2 = 218$$

Groups of objects represents a total number of objects shared or divided into two or more groups of an equal number of the objects.

$$\frac{1}{2}$$
 of $10 = 5$

How Many

The number 18 is made up of how many 10s (tens) and 1s (ones)?

In Maths a **number** or **figure** e.g. **18**, is made up of the **digits 1** and **8**. Each digit has a worth, otherwise known as its **place value**.

The number eighteen is a 2-digit number.

The two digits represent the 10s and 1s column place values.

Place Value Grid

<u>Hundreds</u>	<u>Tens</u>	<u>Ones</u>
<u>100s</u>	<u>10s</u>	<u>1s</u>
	1	8

Strategy Applied

The number eighteen is represented on a Place Value Grid as above.

First, write 8 in the 1s column place value, which is also how many ones there are in the 1s column, 8 ones.

Then, write 1 in the 10s column place value, which is also how many tens there are in the 10s column, 1 ten.

Finally, the **Place Value Grid** above shows how many **10s** and **1s** there are, **1 ten** and **8 ones**.

Test Questions

How many 10s (tens) and 1s (ones) make up each number?

- 1) 18 = ____
- 2) 21 = ____
- 3) 32 = ____
- 4) 45 = ____
- 5) 57 = ____
- 6) 69 = ____
- 7) 70 = ____
- 8) 83 = ____
- 9) 94 = ____
- 10) 99 = ____
- 11) 101 = ____
- 12) 106 = ____
- 13) 110 = ____
- 14) 120 = ____

Digit Value

What is the digit value of the 10s (tens) and 1s (ones) digits in the number 18

In Maths a number or figure e.g. 18, is made up of the digits 1 and 8.

Each digit has a worth, otherwise known as its place value.

The number eighteen is a 2-digit number.

The two digits represent the 10s and 1s column place values.

Place Value Grid

<u>Hundreds</u>	<u>Tens</u>	<u>Ones</u>
<u>100s</u>	<u>10s</u>	<u>1s</u>
	1	8

Strategy Applied

The number eighteen is represented on a Place Value Grid as above.

First, in the 1s column the value of the digit is worked out by multiplying how many ones there are, 8 by 1 (1s column), which is 8.

Next, in the **10s** column the value of the digit is worked out by multiplying how many **tens** there are, **1** by 10 (**10s** column), which is **10**.

Finally, the digit value of the **10s** and **1s** digits is **10** and **8**.

Test Questions

What is the digit value of the 10s (tens) and 1s (ones) digits in each number?

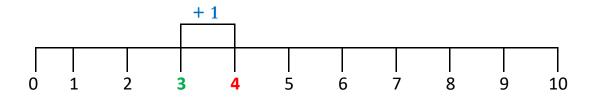

- 1) 18 = ____
- 2) 21 = ____
- 3) 32 = ____
- 4) 45 = ____
- 5) 57 = ____
- 6) 69 = ____
- 7) 70 = ____
- 8) 83 = ____
- 9) 94 = ____
- 10) 99 = ____
- 11) 101 = ____
- 12) 106 = ____
- 13) 110 = ____
- 14) 120 = ____

1 More Than

Word Problem

Beaulah is thinking of a number. Her number is **one more than three**. What is her number?

Number Line

Strategy Applied

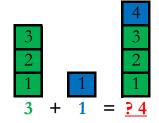

First, find and touch the number three on the number line.

Then, **count forwards one** more aloud in number order, whilst touching the numbers on the number line.

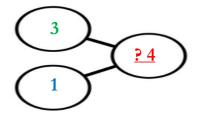

Next, the number counted on to should be **four**.

Finally, three plus one equals four.

Concrete Object

Column Addition

Test Questions

- 1) 3 + 1 = ____
- 2) 5 + 1 = ____
- 3) 12 + 1 = ____
- 4) 19 + 1 =
- 5) 24 + 1 = ____
- 6) 33 + 1 = ____
- 7) 57 + 1 = ____
- 8) 86 + 1 = ____
- 9) 99 + 1 = ____
- 10) 100 + 1 = ____
- 11) ___ = 111 + 1
- 12) ___ = 121 + 1
- 13) 1 more than 13 is = ____
- 14) 1 more than ___ = 40

3	1
<u>? 4</u>	

More Than 1

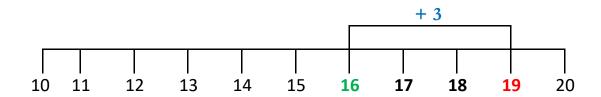

Word Problem

Uncle Washington has three more grapes than Auntie Merlin.

Aunty Merlin has sixteen grapes.

How many grapes does Uncle Washington have?

Number Line

Strategy Applied

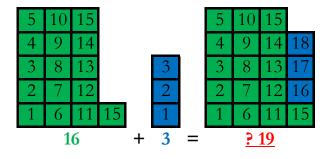

First, find and touch the number sixteen on the number line.

Then, **count forwards three** more aloud in number order, whilst touching the numbers on the number line.

Next, the number counted on to should be **nineteen**.

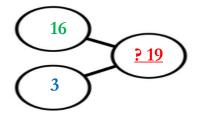

Finally, sixteen plus three equals nineteen.

Concrete Object

Column Addition

Page 7

Test Questions

4)
$$57 + 7 =$$

$$13) = 5 + 97$$

16	3
<u>? 19</u>	

10 More Than

Word Problem

Barry is thinking of a number. His number is **ten more than thirteen**. What is his number?

Number Grid

10					15				
20	21	22	23	24	25	26	27	28	29

Strategy Applied

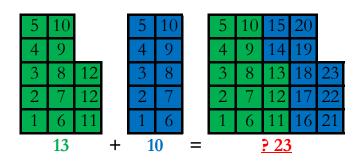

First, find and touch the number thirteen on a number grid.

Then, **count down one square** which is **ten** more, aloud in number order, whilst touching the numbers on the number grid.

Next, the number counted on to should be twenty three.

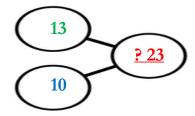

Finally, thirteen plus ten equals twenty three.

Concrete Object

Column Addition

$$\begin{array}{c|cccc}
 & 10s & 1s \\
 & 1 & 3 \\
 & + & 1 & 0 \\
\hline
 & 2 & 3 \\
\end{array}$$

Test Questions

$$13) = 10 + 83$$

13	10
<u>? 23</u>	

Multiples of 10s

1)
$$8 + 20 = ?$$

Word Problem

Lynchy has **eight** football stickers. Rodney has **twenty more**. How many football stickers does Rodney have?

Number Grid

0	1	2	3	4	5	6	7	8	9
10	11	12	13	14	15	16	17	18	19
20	21	22	23	24	25	26	27	28	29

Strategy Applied

First, find and touch the number eight on a number grid.

Then, **count down one**, **two squares** which is **ten**, **twenty** more, aloud in number order whilst touching the numbers on the number grid.

Next, the number counted on to should be twenty eight.

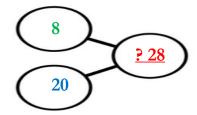

Finally, eight add twenty equals twenty eight.

Concrete Object

5 10 15 20 4 9 14 19 3 8 13 18 2 7 12 17 1 6 11 16 8 + 20 28 5 10 15 20 25 4 9 14 19 24 3 8 13 18 23 28 2 7 12 17 22 27 1 6 11 16 21 26

Bonds to 10 and 100

1)
$$2 + ? = 10$$

Number bonds to 10, means two or more numbers added together that make the number 10.

Number bonds to 100, means two or more numbers added together that make the number 100.

Number Line

Strategy Applied

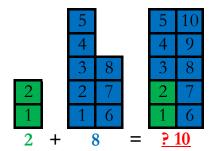

First, find and touch the number two on the number line.

Then, **count forwards** aloud from the next number after **two** on to **ten** in number order, whilst touching the numbers on the number line.

Next, the amount of numbers counted on should be eight.

Finally, two plus eight equals ten.

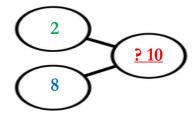

Concrete Object

Column Addition

Regroup 1 ten into 10 ones

	<u>? 10</u>

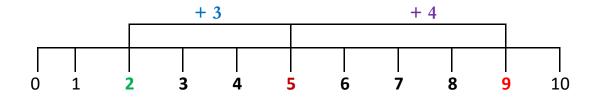

Multiple Numbers

Word Problem

Three children walked to school. Barbara walked 2 miles, Faye walked 3 miles and Doreen walked 4 miles.

How many miles did all the children walk in total?

Number Line

Strategy Applied

First, find and touch the number two on the number line.

Then, **count forwards three** more aloud in number order, whilst touching the numbers on the number line.

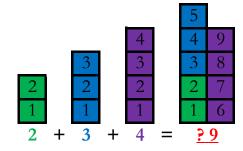

Next, the number counted on to should be five.

Then, **count forwards four** more aloud in number order, whilst touching the numbers on the number line.

Next, the number counted on to should be nine.

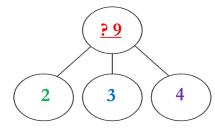

Finally, two plus three plus four equals nine.

Concrete Object

Column Addition

	? 9						

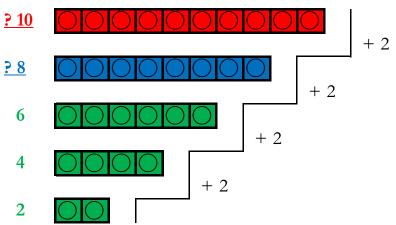

Multiples of 2, 3, 5 and 10

In the **number pattern** below, find the next two missing numbers.

Word Problem

Sebert uses cubes to make the **number pattern** of **two**, **four** and **six**. He calculates the next two missing numbers in the number pattern. How many cubes will he need, to make the next two numbers?

Concrete Object

Strategy Applied

Work out the **number pattern**, by finding out the **difference between** the **three** numbers.

The difference between each of the **three** numbers is known as the **rule**. First, **count forwards** from **two** to **four** equalling **two**, the rule is **+2**. Then, count forwards from **four** to **six** equalling **two**, the rule is **+2**. The rule is **+2** (**count on two**) to each of the numbers in the number pattern.

Continue this number pattern to find the next two missing numbers. Next, find **six** on the number line and count on **two** more, total is **eight**. Then, find **eight** on the number line and count on **two** more, total is **ten**. Finally, the next two missing numbers in the number pattern are **eight** and **ten**.

Number Line

Test Questions

9)
$$50p + 20p + 20p =$$

$$10) 27m + 35m + 35m = ____$$

$$13) = 3 + 30 + 3$$

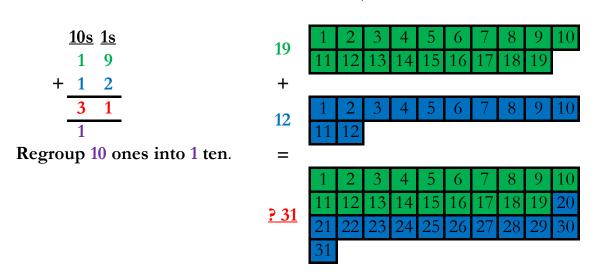

Column Addition

Word Problem

Nineteen children voted for football, twelve children voted for tennis. How many children voted for a sport?

Column Addition

Concrete Object

Strategy Applied

First, in the 1s column, 9 + 2, equals 11 ones (10 + 1).

Then, write 1 in the total value of the 1s column.

Next, exchange/regroup the 10 ones into 1 ten from the 1s column to the 10s column and write 1 ten below the total value line of the 10s column. Then, in the 10s column, 1 + 1 + 1, equals 3 tens (30).

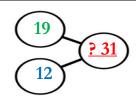

Next, write 3 in the total value of the 10s column.

Finally, nineteen plus twelve equals thirty one.

Part Whole Model

Page 23

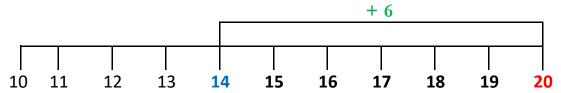

Test Questions

Find the Missing Number

Word Problem

Altogether Donald and Dennis have £20. Dennis has £14. How much money does Donald have?

Number Line

Strategy Applied

20 = ? + 14 can be written as 14 + ? = 20.

First, find and touch the number fourteen on the number line.

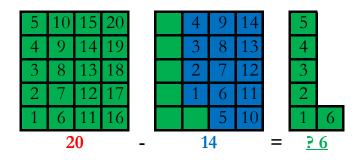

Then, count aloud from the next number after fourteen on to twenty.

Next, say how many numbers were **counted on**, it should be **six** more.

Finally, the **value** of the missing number is **six**.

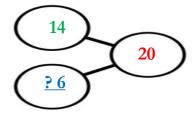

Or use the **inverse** of addition, which is subtraction,

Concrete Object

$$20 - 14 = ?$$
. Column Addition

Regroup 1 ten into 10 ones.

Test Questions

$$3) 20 + = 100$$

7)
$$£16 + _{}$$
 = £20

8)

In the **number pattern** below, find the next two missing numbers.

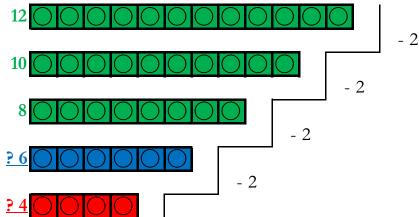

Word Problem

The three numbers are written down in a **number pattern**.

Twelve is the greatest number, ten is the next biggest number and eight is the smallest number.

What are the next two missing numbers?

Concrete Object

Strategy Applied

Work out the **number pattern**, by finding out the **difference between** the **three** numbers.

The difference between each of the **three** numbers is known as the **rule**. First, **count backwards** from **twelve** to **ten** equalling **one**, the rule is **-2**. Then, count backwards from **ten** to **eight** equalling **one**, the rule is **-2**. The rule is **-2** (**count back two**) from each of the numbers in the number pattern.

Continue this number pattern to find the next two missing numbers. Next, find **eight** on the number line and count back **two** less, total is **six**. Then, find **six** on the number line and count back **two** less, total is **four**. Finally, the next two missing numbers in the number pattern are **six** and **four**.

Number Line

Multiples of 10s and 1s

Word Problem

Sheridan needs fifty three grams of gluten free wheat to make bread.

There are **fourteen grams** left in the cupboard.

How many more grams does she need?

Number Grid

30	31	32	33	34	35	36	37	38	39
←40	41	42 ←	- 43	44	45	46	47	48	49
50	51	52	53	54		56			59

Strategy Applied

Partition 14 into multiples of 10s and 1s, which is 10 + 4.

First, find and touch the number fifty three on a number grid.

Then, **count up one square** which is **ten** less, aloud in number order whilst touching the numbers on the number grid.

Next, the number counted back to should be forty three.

Then, **count backwards four** less aloud in number order, whilst touching the numbers on the number grid.

Next, the number counted on to should be **thirty nine**.

Finally, fifty three subtract four equals thirty nine.

Column Subtraction

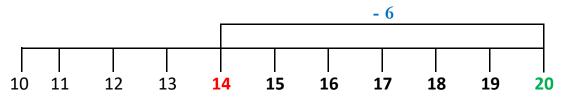

Regroup 1 ten into 10 ones.

Doubling

Word Problem

Joyce and Lance **each** take **three** of Richard's **twenty** colouring pens. How many are **left?**

Number Line

Strategy Applied

Use doubling, minus three and minus three, equals minus six.

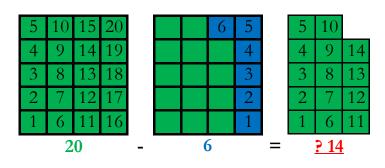

First, find and touch the number twenty on the number line.

Then, **count backwards six** less aloud in number order, whilst touching the numbers on the number line.

Next, the number counted back to should be **fourteen**.

Finally, twenty subtract six equals fourteen.

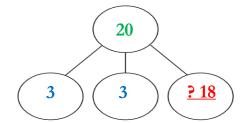

Concrete Object

Column Subtraction

Regroup 1 ten into 10 ones.

Word Problem

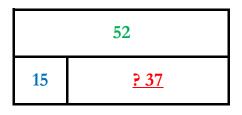

Fifty two children are on two coaches. **Fifteen** of them are on **Coach B**. How many children are on **Coach A?**

Column Subtraction

10s 1s 4 5 12 - 1 5 3 7

Regroup 1 ten into 10 ones.

Bar Model

Part Whole Model

Strategy Applied

First, in 1s column, 2 subtract 5, you cannot do as 2 is a lower value than 5. Then, exchange/regroup 1 ten into 10 ones from the 10s column to the 1s column.

Next, cross out the 5 tens and write 4 tens above, then write the exchanged/regrouped 1 ten next to the 2 ones to make 12 ones.

Then, in the **1s column**, **12** subtract **5**, equals 7 **ones** (**7**), write **7** in the **total value** of the **1s column**.

Next, in the 10s column, 4 subtract 1, equals 3 tens (30), write 3 in the total value of the 10s column.

Finally, fifty two subtract fifteen equals thirty seven.

Test Questions

Find the Missing Number

1)
$$36 - ? - 5 = 23$$

Word Problem

Rodney goes into a shop with thirty six pence. He buys two items and has twenty three pence in change. One item cost five pence.

What is the cost of the other item?

Number Grid

20	21	22	23 ←	- 24	25	26	27	28 🗲	- 29
30 ←	- 31	32	33	34	35 ←	- 36	37	38	39

Strategy Applied

First, find and touch the number thirty six on a number grid.

Then, **count backwards five** less aloud in number order, whilst touching the numbers on the number grid.

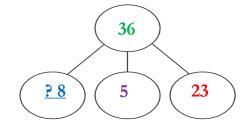

Next, the number counted back to should be thirty one.

Then, **count backwards** aloud from the next number before **thirty one** back to **twenty three**, whilst touching the numbers on the number grid. Next, say how many numbers were **counted back**, it should be **eight** less. Finally, the **value** of the missing number is **eight**.

Fraction of a Quantity

1)
$$\frac{1}{2}$$
 of 16 = ?

Word Problem

Grandad bought a bag of 16 cherries.
Grandad ate half of the number of cherries in the bag.
How many cherries did Grandad eat?

Concrete Object

Strategy Applied

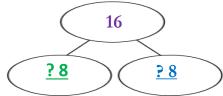

A fraction is part of a whole or part of 1 and a half is 1 of 2 equal groups. 16 is the quantity shared equally between the total number of equal groups.

2 is the denominator, represents the total number of equal groups.

1 is the numerator, represents one of the equal groups.

First, pick up sixteen objects and place them together. Now count aloud to check there are only sixteen objects; 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16.

Then, **share** the **sixteen** objects one at a time **equally between** the **two** groups, until exactly the **same quantity** of objects are in **each** of the groups Next, count how many objects there are **altogether** in **one group**, there should be five objects; **one**, **two**, **three**, **four**, **five**, **six**, **seven**, **eight**. Finally, **one half** of **sixteen** equals **eight**.

Word Problem

Mrs O'Neal shared **ten** stickers **equally** between **five** children. How many stickers did **three** of the children get in **altogether**?

Concrete Object

Strategy Applied

A fraction is part of a **whole** or part of **1** and a **fifth** is 1 of 5 **equal groups**. **10** is the **quantity** shared **equally** between the **total** number of **equal groups**.

- 5 is the **denominator**, represents the **total** number of **equal groups**.
- 3 is the numerator, represents three of the equal groups.

First, pick up ten objects and place them together. Now count aloud to check there are only ten objects; 1, 2, 3, 4, 5, 6, 7, 8, 9, 10.

Then, share the ten objects one at a time equally between the five groups, until exactly the same quantity of objects are in each of the groups.

Next, count how many objects there are **altogether** in **three** of the **groups**, should be six objects; **one**, **two**, **three**, **four**, **five**, **six**.

Finally, three fifths of ten equals six.

Amount is something that has a numerical value, for e.g. 10 cubes

Bar Model is a pictorial representation of a number sentence in the form of bars or boxes used to solve number problems.

Column is a vertical arrangement for example, in a table the cells arranged vertically.

Column Place Value is the value of a digit that relates to its position or place in a number within a column.

Concrete Objects are objects that can be handled and manipulated to support understanding of the structure of a mathematical concept. Materials such as Dienes (Base 10 materials), Cuisenaire, Numicon, are all examples of concrete objects.

Denominator is the number written below the line i.e. the divisor. e.g. in the fraction ²/₃ the denominator is 3.

Digit is one of the symbols of a number system most commonly the symbols 0, 1, 2, 3, 4, 5, 6, 7, 8 and 9. Examples: the number 29 is a 2-digit number; there are three digits in 2.95. The position or place of a digit in a number conveys its value.

Digit Value is the value of a digit that relates to its position or place in a number. e.g. in 82 the digits represent 8 tens and 2 ones.

Dividend in division, is the number that is divided. e.g. in $15 \div 3$, 15 is the dividend.

Divisor is the number by which another is divided. e.g. In the calculation $30 \div 6 = 5$, the divisor is 6. In this example, 30 is the dividend and 5 is the quotient.

Efficient Methods A means of calculation (which can be mental or written) that achieves a correct answer with as few steps as possible. In written calculations this often involves setting out calculations in a columnar layout.

Equals is the symbol: =, read as 'is equal to' or 'equals'. and meaning 'having the same value as'. e.g. 7 - 2 = 4 + 1 since both expressions, 7 - 2 and 4 + 1 have the same value, 5.

Expanded Form is a way to break up a number to show the value of each digit (Partition).

Fraction is the result of dividing one integer by a second integer, which must be non-zero. The dividend is the numerator and the non-zero divisor is the denominator. See also decimal fraction, equivalent fraction, improper fraction, proper fraction, unit fraction and vulgar fraction.

Formal Written Method is the way of setting out working in columnar form. In addition and subtraction, the formal written methods can be referred to as expanded and column addition and/or subtraction. In multiplication, the formal written methods are called short or long multiplication depending on the size of the numbers involved. Similarly in division the formal written methods are called short or long division.

Grid a lattice created with two sets of parallel lines. Lines in each set are usually equally spaced. If the sets of lines are at right angles and lines in both sets are equally spaced, a square grid is created.

Hundred Square is a 10 by 10 square grid numbered 1 to 100. A similar grid could be numbered as a 0 - 99 grid.

Inverse is the opposite or reverse operation.

Mental Calculations refer to calculations that are largely carried out mentally, but may be supported with a few simple written jottings.

Multiple is the result of multiplying a number by an integer, e.g. 12 is a multiple of 3 because $3 \times 4 = 12$.

Multiplicand is a number to be multiplied by another. e.g. in 6×4 , 4 is the multiplier as it is how many lots/groups of 6.

Multiplier is a number to be multiplied by another. e.g. in 5×3 , 5 is the multiplicand as it is the number to be multiplied by 3.

Number Bond is a pair of numbers with a particular total.

Number Line is a line where numbers are represented by points upon it.

Number Sentence is a mathematical sentence involving numbers. e.g. 3 + 6 = 9 and 9 > 3

Numerator is the number written on the top— the dividend (the part that is divided). In the fraction ²/₃, the numerator is 2.

Operations that, when they are combined, leave the entity on which they operate unchanged. Examples: addition and subtraction are inverse operations e.g. 5 + 6 - 6 = 5. Multiplication and division are inverse operations e.g. $6 \times 10 \div 10 = 6$.

Part Whole Model is a pictorial representation of the relationship between a number or number sentence and its component parts.

Partition 1) To separate a set into subsets. 2) To split a number into component parts. e.g. the two-digit number 38 can be partitioned into 30 + 8 or 19 + 19. 3) A model of division. e.g. $21 \div 7$ is treated as 'how many sevens in 21?'

Pictorial Representations do enable learners to use pictures and images to represent the structure of a mathematical concept.

The pictorial representation may build on the familiarity with concrete objects. e.g. a square to represent a Dienes 'flat' (representing 100).

Pupils may interpret pictorial representations provided to them or create a pictorial representation themselves to help solve a mathematical problem.

Place Holder In decimal notation, the zero numeral is used as a place holder to denote the absence of a power of 10.

Place Value is the value of a digit that relates to its position or place in a number. e.g. in 1482 the digits represent 1 thousand, 4 hundred, 8 tens and 2 ones respectively; in 12.34 the digits represent 1 ten, 2 ones, 3 tenths and 4 hundredths respectively.

Product is the result of multiplying one number by another. e.g. the product of 2 and 3 is 6 since $2 \times 3 = 6$.

Quotient is the result of a division. e.g. $46 \div 3 = 15\frac{1}{3}$ and $15\frac{1}{3}$ is the quotient of 46 by 3. Where the operation of division is applied to the set of integers, and the result expressed in integers. e.g. $46 \div 3 = 15$ remainder 1 then 15 is the quotient of 46 by 3 and 1 is the remainder.

Regrouping is to exchange a number for another of equal value. The process of regrouping is used in some standard compact methods of calculation. e.g.: 'carrying figures/exchanging' in addition, multiplication or division; and 'decomposition' in subtraction.

Remainder in the context of division requiring a whole number answer (quotient), the amount remaining after the operation. e.g. 29 divided by 7 = 4 remainder 1.

Repeated Addition is the process of repeatedly adding the same number or amount. One model for multiplication. e.g. $5 + 5 + 5 + 5 = 5 \times 4$.

Repeated Subtraction is The process of repeatedly subtracting the same number or amount. One model for division. e.g. 20 - 5 - 5 - 5 - 5 = 0 so $20 \div 4 = 5$ remainder 0.

Sequence is succession of terms formed according to a rule. There is a definite relation between one term and the next and between each term and its position in the sequence. e.g. 0, 4, 8, 12, 16 etc.

Step Counting is the process of repeatedly adding the same number or amount. One model for multiplication. e.g. $5 + 10 + 15 + 20 = 5 \times 4$.

Total Value is the sum to a calculation.

Zero in a place value system, a place-holder. e.g. 105
